Our Year

WiFi Code: 4018

Standard Licence & Guidelines

Discussion at July 2016 [Automotive Workshop](#)

Automotive manufacturers want legal surety that they can use assets provided by broadcasters using RadioDNS' standards

Broadcasters want to know that their assets are going to be used correctly

Standard Licence & Guidelines

We consulted during H2 2016

Board debated at length the best solution

Decision:

To create a Standard Licence for Metadata (with Guidelines) and encourage broadcaster adoption

HbbTV - DNS Services

HbbTV added DNS discovery to their standard
They approached us to provide their DNS lookup
service for their users

Revenue generating opportunity for RadioDNS

Decision:

To provide a DNS lookup service to HbbTV

Changes to Standards

Some **broadcasters** want to provide “private” streaming URLs and links to enhanced content only to trusted partners

Needed to adapt the **SPI** standard to be able to identify who was asking for metadata

Changes to Standards

NPR requested that we add better support to **SPI** to identify presenters, guests, contributors

Automotive Manufacturers requested that we add support to **SPI** enable voice navigation

Standard Metadata Licence may need a new location in the **SPI** document

Changes to Standards

Decision:

Amend the SPI standard (TS 102 818) to add:

Client Identification

Programme roles

Phonemes

Licence URLs

Standard Metadata Licence

Clarity for broadcasters and manufacturers

Background

Broadcasters are providing metadata and content
Logos etc.

Automotive Manufacturers want to use the
metadata, but want permission from broadcasters

At the **July Automotive Workshop** we agreed to
find a solution

Principles

Broadcasters provide metadata for free

Manufacturers must use it correctly, as defined in the **Implementation Guidelines**

Licence agreement is **implicit** by use

Broadcasters must include a **link to the licence** in their SI file, or it may not be used

Standard Metadata Licence

Accessible on a **permanent URL** on our website

Similar in style to a **Creative Commons** licence

Initially restricted in scope to the **automotive** environment

RadioDNS will **not be a party** to the licence

Attribution-NonCommercial-NoDerivatives 4.0 International (CC BY-NC-ND 4.0)

This is a human-readable summary of (and not a substitute for) the [license](#).

[Disclaimer](#)

You are free to:

Share — copy and redistribute the material in any medium or format.

The licensor cannot revoke these freedoms as long as you follow the license terms.

Under the following terms:

Attribution — You must give [appropriate credit](#), provide a link to the license, and [indicate if changes were made](#). You may do so in any reasonable manner, but not in any way that suggests the licensor endorses you or your use.

NonCommercial — You may not use the material for [commercial purposes](#).

NoDerivatives — If you [remix, transform, or build upon](#) the material, you may not distribute the modified material.

Attribution-NonCommercial-NoDerivatives 4.0 International

Official translations of this license are available [in other languages](#).

Creative Commons Corporation ("Creative Commons") is not a law firm and does not provide legal services or legal advice. Distribution of Creative Commons public licenses does not create a lawyer-client or other relationship. Creative Commons makes its licenses and related information available on an "as-is" basis. Creative Commons gives no warranties regarding its licenses, any material licensed under their terms and conditions, or any related information. Creative Commons disclaims all liability for damages resulting from their use to the fullest extent possible.

Using Creative Commons Public Licenses

Creative Commons public licenses provide a standard set of terms and conditions that creators and other rights holders may use to share original works of authorship and other material subject to copyright and certain other rights specified in the public license below. The following considerations are for informational purposes only, are not exhaustive, and do not form part of our licenses.

Considerations for licensors: Our public licenses are intended for use by those authorized to give the public permission to use material in ways otherwise restricted by copyright and certain other rights. Our licenses are irrevocable. Licensors should read and understand the terms and conditions of the license they choose before applying it. Licensors should also secure all rights necessary before applying our licenses so that the public can reuse the material as expected. Licensors should clearly mark any material not subject to the license. This includes other CC-licensed material, or material used under an exception or limitation to copyright. [More considerations for licensors](#).

Considerations for the public: By using one of our public licenses, a licensor grants the public permission to use the licensed material under specified terms and conditions. If the licensor's permission is not necessary for any reason—for example, because of any applicable exception or limitation to copyright, then that use is not regulated by the license.

Test & Demonstration

Verifying Hybrid Radio Implementations

WiFi Code: 4018

Test & Demonstration

Operational **now**:

Device testing (Core, Visuals, EPG)

In **2017**:

Platform testing

[Perform Test](#)

Validation Certificates

Issued to a **specific** (device + firmware) version

Confirms passed tests **on the date shown**

Not a warranty or guarantee of perfection

Trademarks

We will issue **Trademark Licences** to organisations
Trademark Licence will allow use only on products holding a validation certificate

Currently only **members** can use the Test and Demonstration platform, and therefore use trademarks

Membership

Growing in 2017

WiFi Code: 4018

Membership

We are **entirely** funded by our members

Currently (2017)

25 Members

Target (start 2018)

28 Members

Members by Activity

Members by Continent

Member Benefits

Members are **co-owners** of RadioDNS

Participation in **Working Groups**

Free use of **Test & Demonstration** platform

Marketing and **event** staging

Priority support from the **Project Office**

Member Benefits

The majority of our **support time** goes to:

Automotive Manufacturers / OEMs

Service Providers

Events in 2017

February	March	April
EBU Digital Radio Summit NPR Metadata Summit	ABU Digital Radio Symposium RadioDays Europe	NAB Show
May	September	October
WorldDAB Automotive Event	IFA (TBC) IBC (TBC)	WorldDMB General Assembly CRA Conference (TBC)

Devices 2017

What's on the market / coming to market

WiFi Code: 4018

Tabletop

Frontier Silicon enable RadioDNS support in the **Undock** partner app for their modules

Demo outside

Philips, Sony both keep RadioDNS under review, would like more broadcasters providing Visuals

Automotive

Most **Manufacturers** have requested RadioDNS support from their OEMs

We have seen **enormous increase** in OEM support requests, particularly for demos

Remaining objections: **Coverage** and **licensing**

Expect a line-fit RadioDNS implementation this year

Accelerating Devices

Coverage is key to growing faster

We'll keep growing coverage by **linking** broadcasters to service providers

RadioDNS Hybrid Radio Seminar 2017 - EBU Geneva
Walter Huijten

RadioDNS & NPO

Walter Huijten

Service Manager Radio

**Committed to RadioDNS and Hybrid Radio
since 2012**

Hybrid Radio

12 channels on DAB and Internet

5 channels on FM

Ubiquitous: be present everywhere

Metadata: look good on all devices

Current Focus

Project logo

- solve chicken & egg (broadcasters have a task!)
- relevance by coverage

Automobile

- best use case for rich experience
 - especially competitive car environment
-

In short: look good everywhere

Logos always present and current

Station and programme info

Service switching if possible

Relevant and timely visuals (e.g. adverts)

Alternative content to broadcast

With minimum effort for NPO

By open standards = RadioDNS

Broadcaster wants max. effect with min. effort

Publish once distribute many

Prefer open standards to proprietary solutions

Risk of stale metadata and logos in cars

Broadcaster wants to be in control

Thanks for your attention

Items

The screenshot displays a web-based CMS interface for radio station management, divided into two main panels. The left panel, titled 'Instellingen' (Settings), features a navigation bar with tabs for 'INSTELLINGEN', 'STATION INFORMATIE', 'UITINGEN', 'RADIOVIS SLIDES', and 'DATA MODEL'. The 'DATA MODEL' tab is active, showing two sections: 'Externe Berichten' (External Messages) with entries for 'Twitter', 'Facebook', and 'Appje', and 'Items' with entries for 'Item / Presentatie', 'Actie / Event', 'Doonverwijping', 'Promotionele aankondiging', 'Nieuws', 'Verkeer', and 'Muziek'. A blue plus icon is visible at the bottom of the 'Externe Berichten' list. The right panel, titled 'Item / Presentatie', shows configuration options for a selected item. It includes a 'Type' dropdown set to 'Item / Presentatie', an 'id' field with the value '11', and a 'Gegevens' (Data) section with radio buttons for 'Gesproken op radio' (selected), 'Item uit Playlist', and 'Verborgen als keuze in UI'. Below this is a 'Samenvatting' (Summary) section with fields for 'Type: TEXTARCA', 'TW User' (Type: TWITTER_USER), and 'TWTag' (Type: TWITTER_TAG). A blue plus icon is at the bottom right of this panel. At the very bottom, there are two buttons: 'OPSLAAN' (Save) on the left and 'ANNULEREN' (Cancel) on the right.

Helping to grow hybrid radio

Michael Hill, Managing Director

WiFi Code: 4018

Radioplayer aims to help in **three key areas**

- Understanding hybrid **hardware**
- Improving the quality of hybrid **metadata**
- Helping to refine the hybrid **user experience**

'Stretch projects' help us explore hybrid

We challenged ourselves to build a car radio system with...

- A single list of stations/favourites across DAB, FM, and IP
- The ability to switch platform automatically as signals vary
- Extra features powered by a connected smartphone
- A simple interface that's safe to use in a car

Radioplayer Car - launching this month

www.radioplayercar.com

WiFi Code: 4018

What we learned about **hybrid hardware**

- A good radio needs multiple tuners
- Implementation standards for DAB chips vary
- 'Over-the-air' firmware upgrades are really useful
- In high-end hybrid hardware, there are challenges around physical size, power management, and heat
- Several interesting 'software defined radio' solutions are promised....but few are in production yet

What we learned about **hybrid metadata**

- A hybrid radio needs the right 'metadata Lego'
- The quality of over-the-air metadata varies globally
- There's no single reliable source of metadata
- With the right knowledge/effort, you can fill the gaps
- But maintaining hybrid metadata needs care and resource

What we learned about the **hybrid user experience**

- The core radio experience is what's important
- Switching audio platforms seamlessly is difficult
- A 'connected radio' must also work when offline
- A simple interface is a safe interface – limit choice!
- Voice control is hard to implement, but useful

Radioplayer **actions** – how we're helping

- Launching Radioplayer Car, and sharing our learnings
- Supporting Project Logo, with automated feeds (Austria)
- Contributing to the WorldDAB Automotive UX Group
- Partnering with car companies, to encourage hybrid
- Prototyping new hybrid interfaces, using our 'black box'
- New trial API - one endpoint across Radioplayer Worldwide
