RMB

RadioDNS Hybrid Radio

Nick Piggott

**Deliver audio
over broadcast**

Reliable,
ubiquitous, free to
air

**Enhance radio by
using IP in parallel**

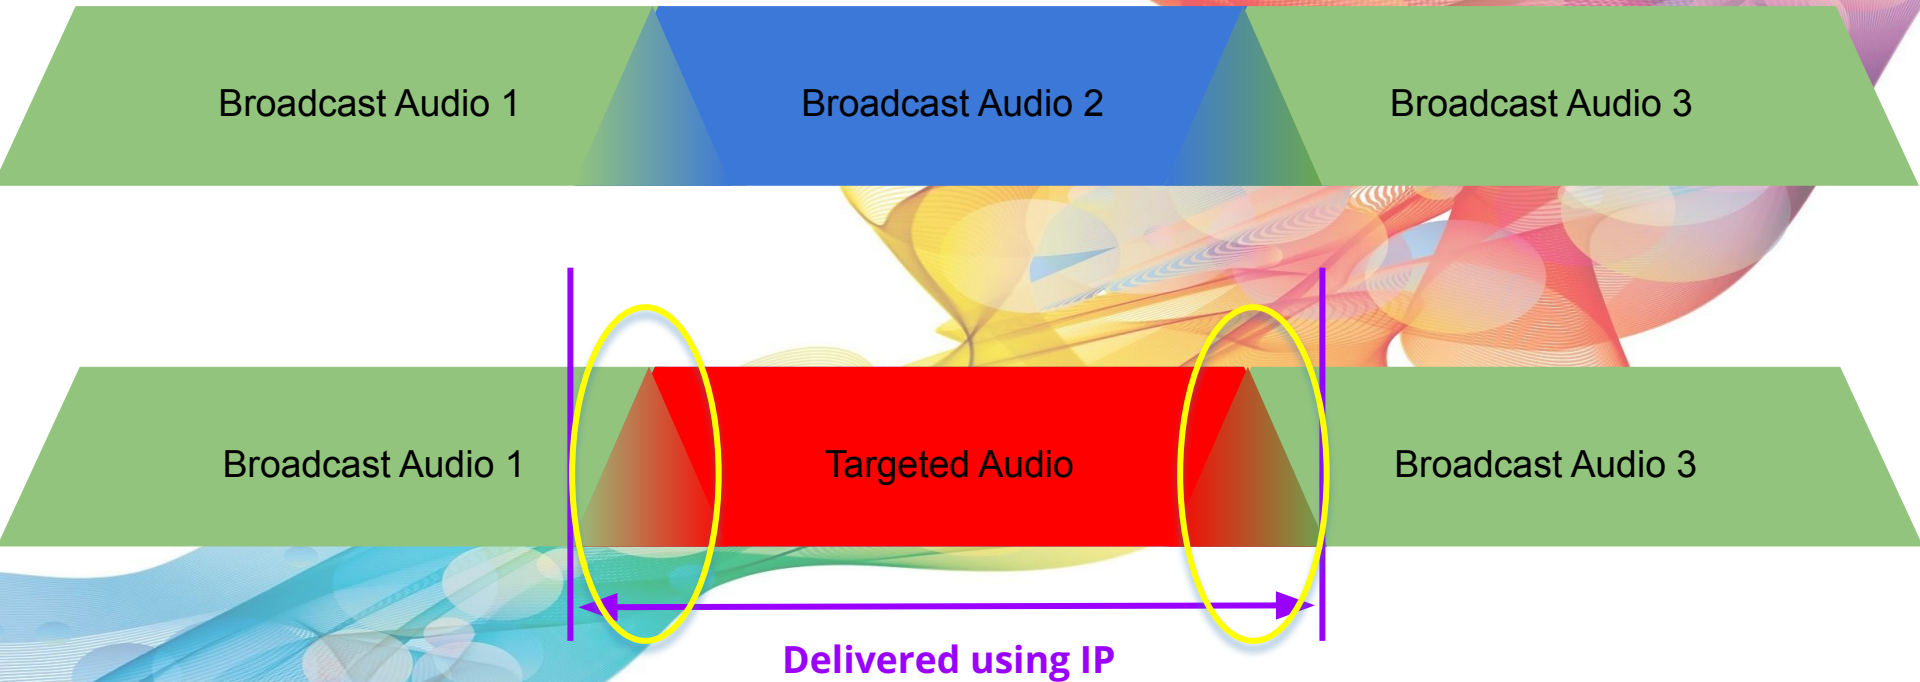

Add content,
metadata &
interactivity

Broadcast Audio Replacement

Enable the **seamless** replacement of broadcast audio with **audio delivered using IP**

Seamless Replacement

Concept

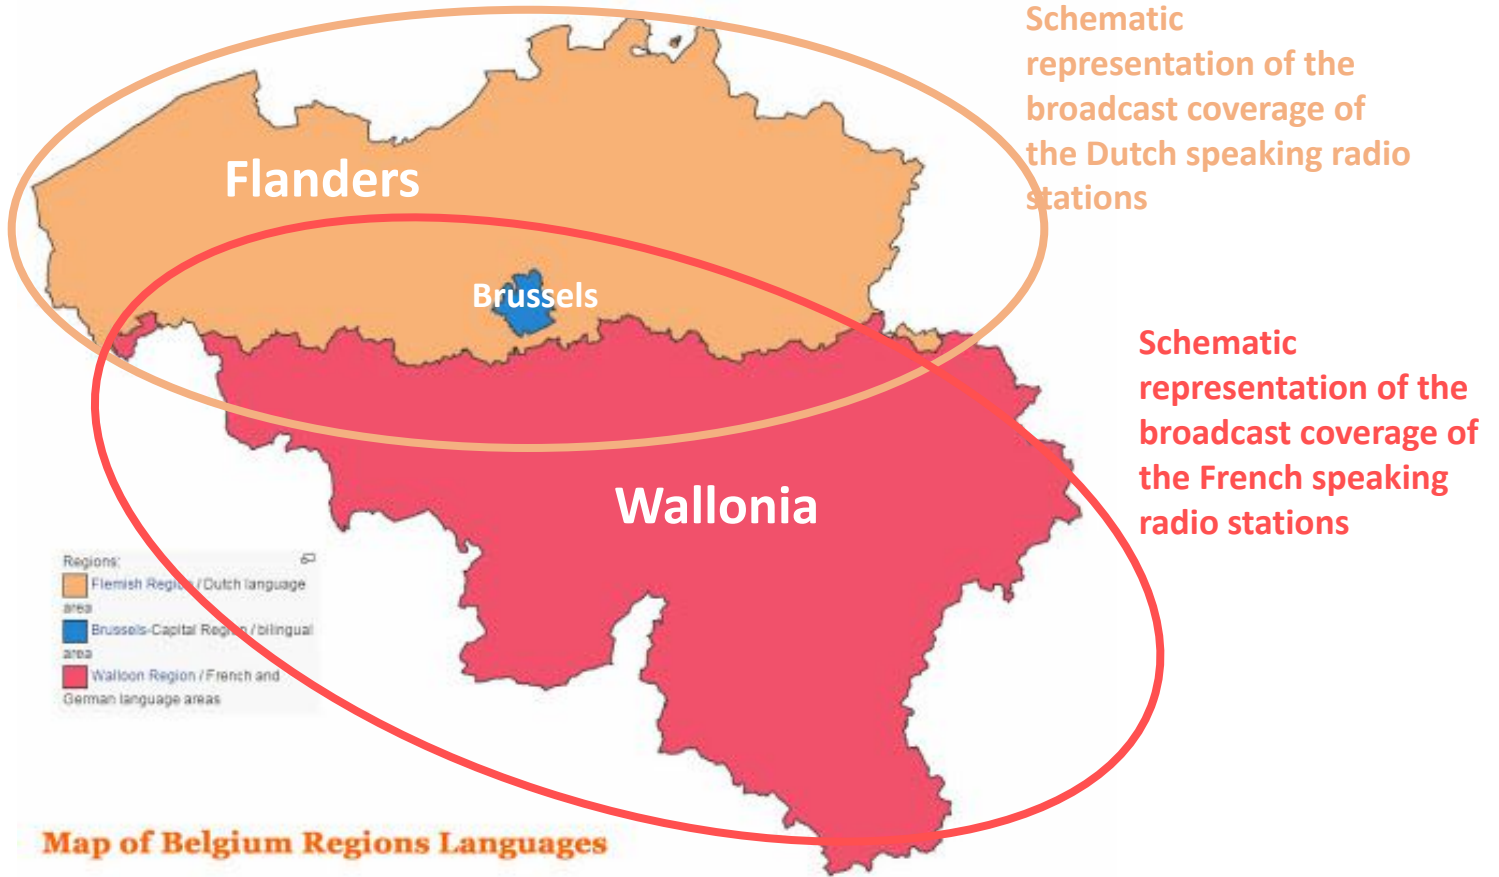

Francis Goffin

Belgium

Federal state

Population:
11,5 million

Schematic representation of the broadcast coverage of Brussels and Wallonia

FM:

One FM network allowing **many** regional windows

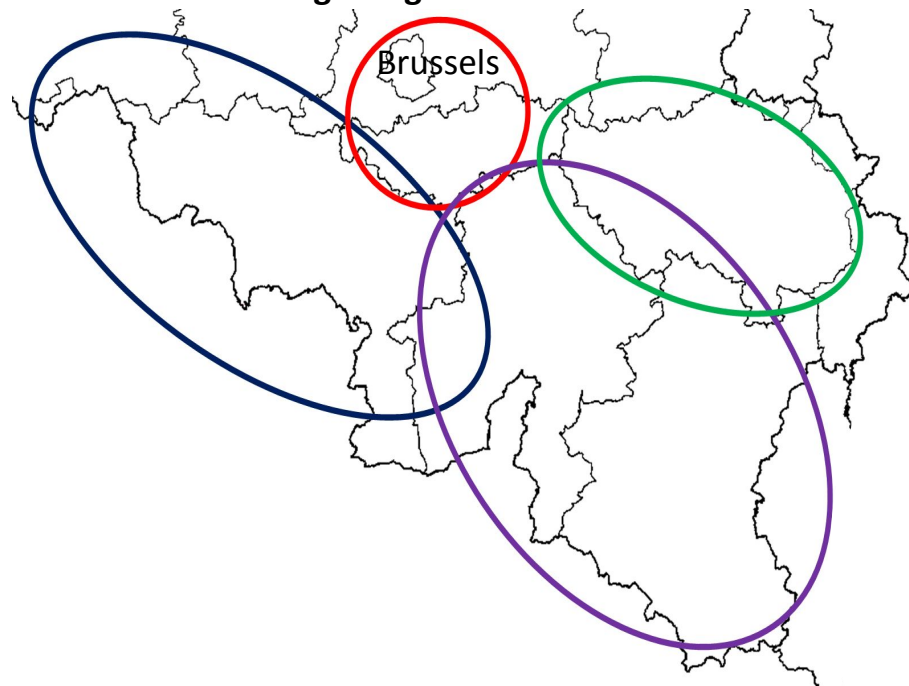

(for local programs and/or for local advertising breaks)

Schematic representation of the broadcast coverage of Brussels and Wallonia

DAB+:

One DAB+ layer made of 4 MUX,
allowing **4** regional windows

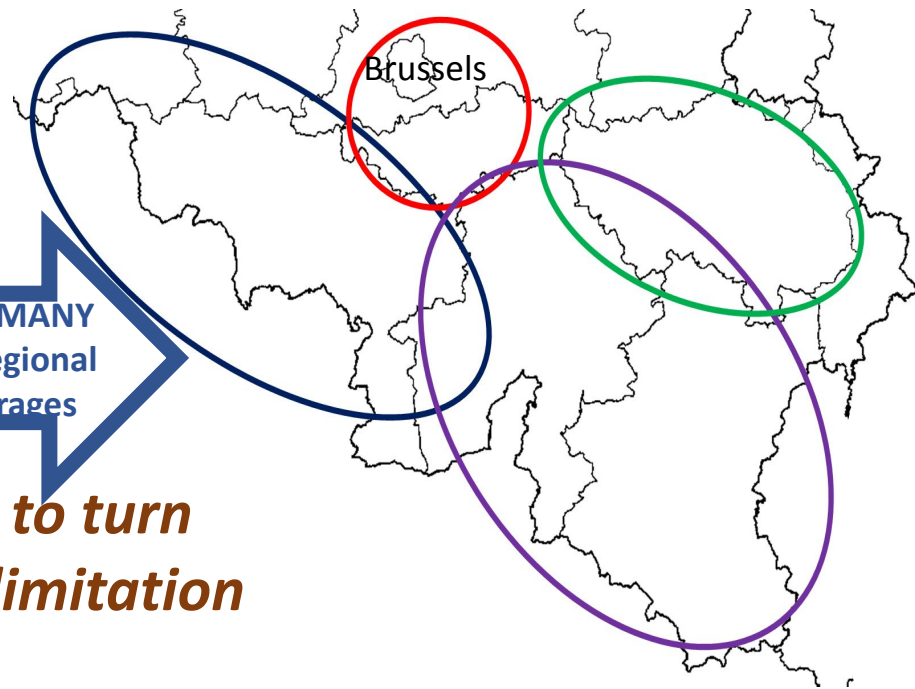

Schematic representation of the broadcast coverage of Brussels and Wallonia

FM:

DAB+

From MANY
to 4 regional
coverages

*How to turn
this limitation
into
opportunities?*

**Targeted audio replacement on DAB+/IP
(broadcast audio content replacement via internet
in a live DAB+ program)**

Broadcaster

Sync

Advertising
Sales house

Targeted advertising content

Targeted radio content

OR

Targeted
audio
content

Listener

DAB+ live radio program

Advertising, individual songs,
news, local content, etc
(any kind of listener targets)

Case Study

Valérie Janssens

Addressable TV with BE REMARKABLE

ATV in a few words

Definition

ATV is a **new form of advertising** that allows advertisers to address **the right message** to **the right household**

Linear TV = context based
ATV = audience based

Interest from a broadcasters' point of view

- Re-create value vs. inventory scarcity & necessity to reduce advertising pressure
- Propose a relevant alternative to GAFA
- Contribute to the building of a strong regional ecosystem

Technical difference in measurement

LINEAR TV

Panel based

ATV

Settop box based

How it works

Linear

RMB

RTBF

PX

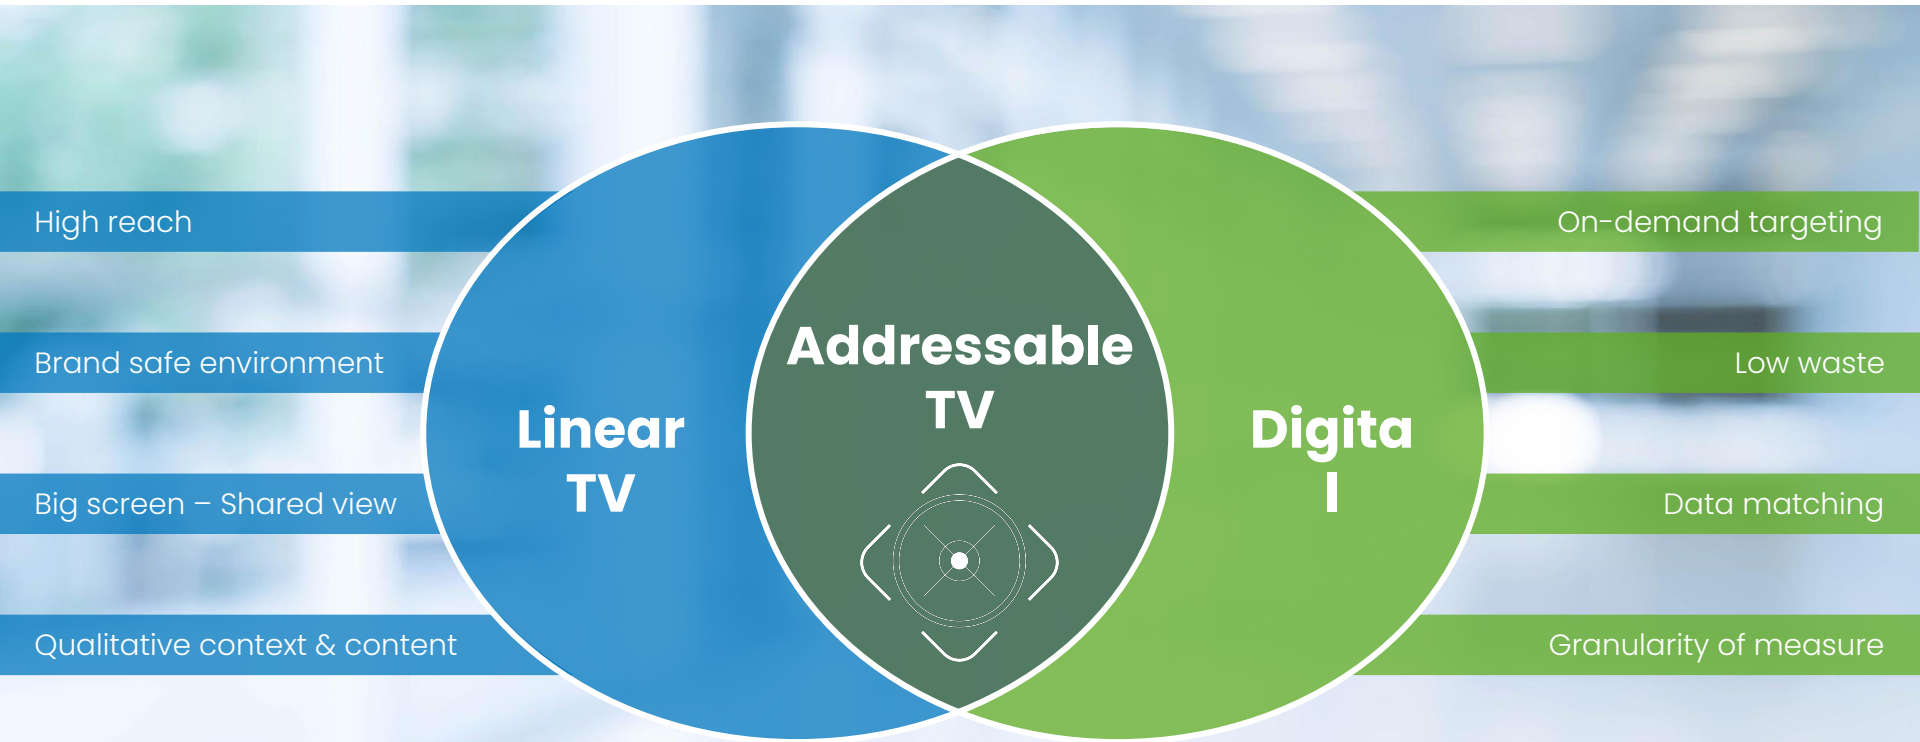

Advantages

Bringing digital to TV

Power of TV combined to digital personalization

Television

Buying process

Linear TV

Awareness

Optimized audience

Consideration

Improved advertising
& brand experience

Intent

Attribution

Purchase

ATV

Benefits

- Belgian ecosystem
- More relevance & campaign efficiency
- Optimizing future campaigns based on back-end results
- Real ROI measure
- Tailormade messages
- Possibility to use own data
- Opportunity for regional & niche actors

| Advantages on TV consumption

CONSUMERS

Improved
Experience

Benefits

- ❑ Decreased advertising pressure
- ❑ Improved advertising experience unified across all interactions
- ❑ Improved brand experience
- ❑ Improved customers interests

| Advantages to manage a campaign

AGENCIES

- ☐ Clients
- ☐ Budgets
- ☐ Offer innovation possibilities to clients

New

Benefits

| Advantages to deliver a message

ADVERTISERS

8/10 are interested in using addressable TV

- Relevance (reduce waste)
- Campaign efficiency
- Analytics

- Association of TV power with measurability of digital
- Complementarity with linear TV and OLV

- Futur campaigns based on back-end results
- Smarter Use of data
- Cheaper CPM on niche segments
- Combinaison of reach and precision

- Come on TV
- Creative productions
- Custom messaging : « my message to right household »
- Local, regional, niche

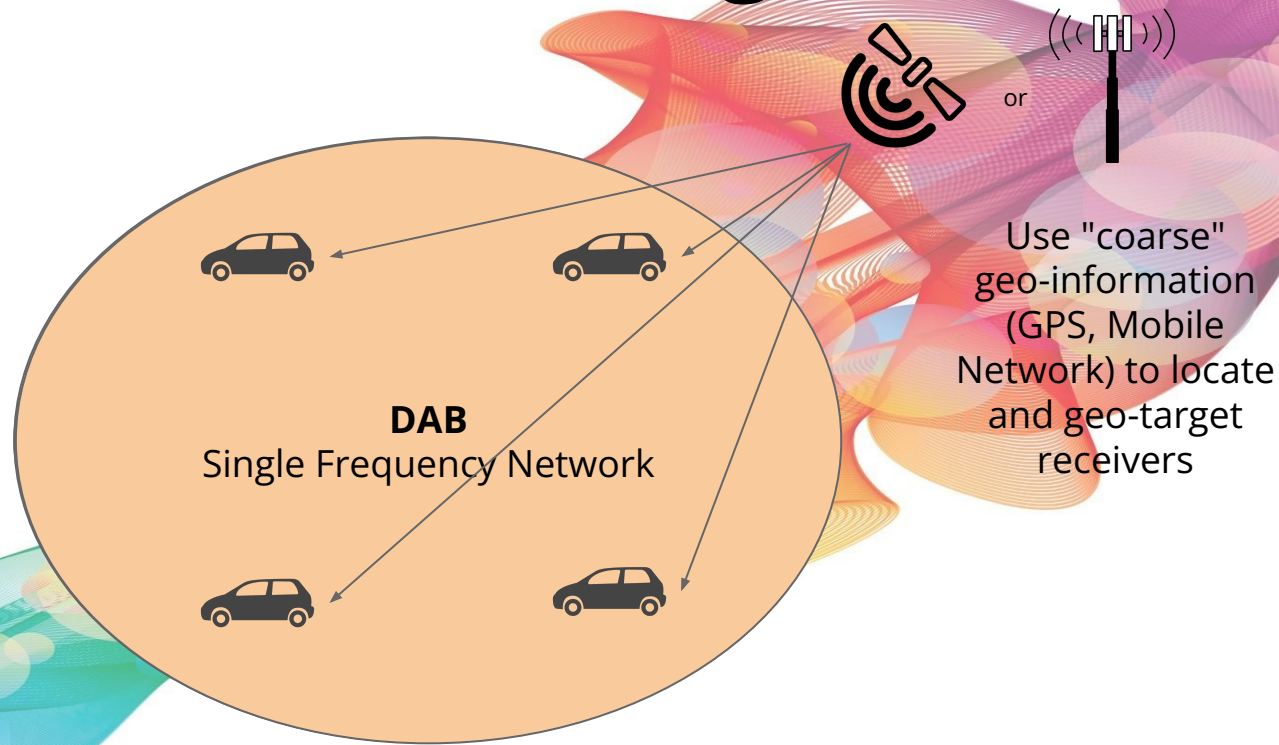

Use Cases

Nick Piggott

Use Case #1

As a broadcaster I want to replicate the geographical targeting of advertising I have across individual FM transmitters into a larger digital radio coverage (single frequency network)

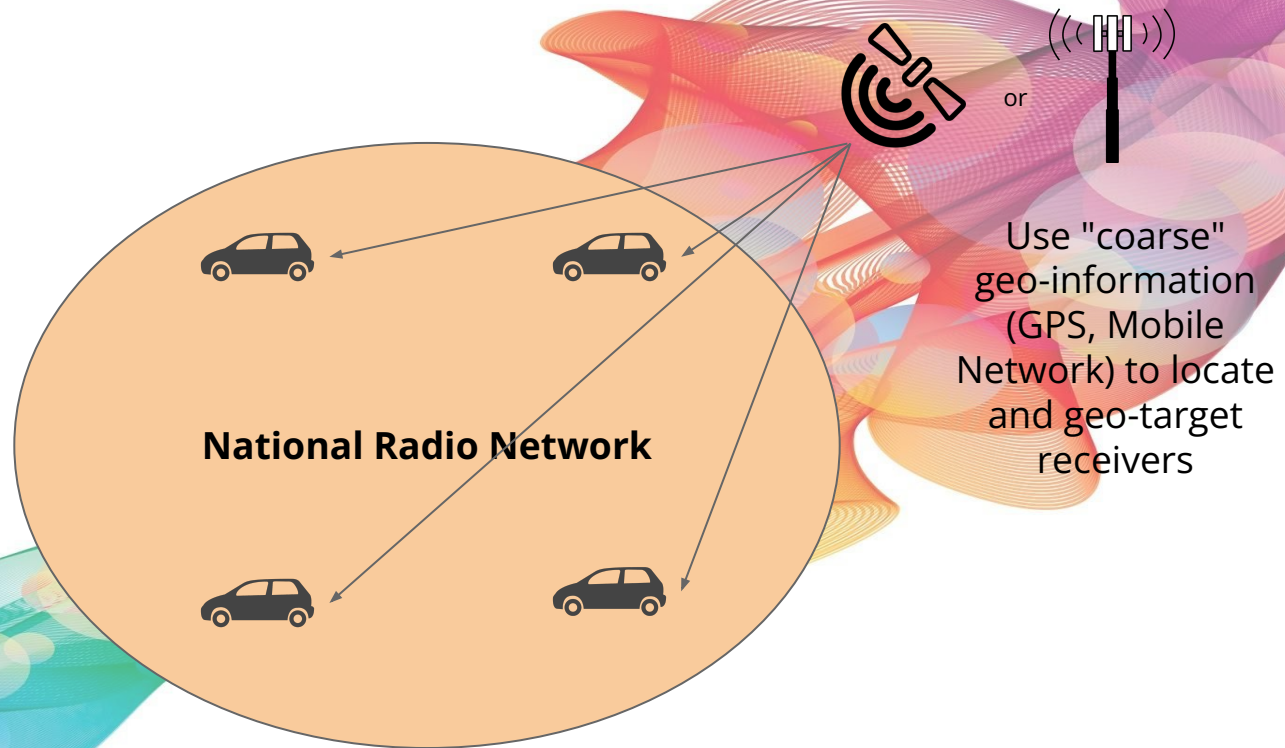

Geo-targeted advertising

Use Case #2

As a listener I want to hear localised information about traffic and weather when I am listening to a national radio service

Localised Content

Use Case #3

As a broadcaster, I want to offer the same kind of personalised advertising to broadcast radio listeners that we can offer online

Use Case #4

As a listener, I would like to switch the current song with one I like more, and then go back broadcast when it's finished

Personalised / Targeted Content

Use personal information (through login?) about a user to target content to be delivered

Use "coarse" geo-information (GPS, Mobile Network) to locate and geo-target receivers

Existing Use Cases

The method to replace audio is **the same**

The data used to decide which audio to replace **differs**

- Coarse location information
- Detailed location information
- Passive user data capture
- Active / detailed user data sharing (login)

More Use Cases?

From broadcasters

From listeners

From manufacturers

Targeted Audio

Valuable for commercial radio

Valuable for public service radio

Requires individual listener data

A "login" standard already exists (CPA - Cross Platform Authentication)

Listener Data

Valérie Janssens

| Targeting an audience

Actionable data

Huge choice of criteria

Profile

Age
Gender
Language
Social class
Education
Family
Purchase Power
Business vs Private

Location

Zip Code
Urbanization
Zone
District
NIS 9

Content consumption

Sport
Foot
Adventure
Foodies
Family / Baby
Tech Savvies
Gamers
DIY
Health / Green
Pet Lover

Ownership

Home
Building
Smartphone
Garden
Recent Movers

Lifestyle

Interior lovers
Promo buyers
Online buyers
Plane / Car travellers
Gastronomy lovers
Active social life
Optical buyers
Eco buyers
Pet/Dog/Cat owners
Etc.

Intent

Intent Car buyers
Intent Movers
Intent Renovators

From July

The background of the slide is a photograph of a modern building with a dark, textured facade and large glass windows. Several balconies are visible, some with plants. Overlaid on the image are four blue target icons, each consisting of concentric circles and a crosshair. One target is in the top center, one is in the middle right, one is in the bottom left, and a smaller one is in the bottom right. A semi-transparent dark green banner is positioned across the middle of the image, containing the text 'Use case « Local Advertiser »'. At the bottom of the slide, there is a horizontal bar with segments of blue, red, orange, and green.

Use case « Local Advertiser »

ADDRESSABLE TV - CORICA

□ Coffie roaster and Premium Tea Shop

□ Campaign period: 27/08/2024 to 09/09/2024

□ KPI's

- #visits on (www.corica.be)
- # new clients
- # sales on website + average cart, conversion rate e-commerce
- Measurement before, during and after ATV campaign

- # New clients : + 13%
- # Orders : + 45%

- Sales: +39%
- Transformation rate (conversion from visit to purchase): x1,6

*Taux de transformation
(conversion e-commerce)
est le % de visites ayant abouti
à une commande validée*

Next Steps

Technical Working Team

Collects **Use Cases**

Designs a technology solution

Prototypes

Publish a **Technical Standard**

Broadcasters and Manufacturers implement

Issues to address

Technology Solution

Works and meets the use cases

Data Insight

Access to the data that adds values

Incentives to Implement

Investment is required to implement this technology

- New systems at broadcasters
- New functionality in receivers

What are the incentives to make this investment?

Are they aligned between broadcasters and manufacturers?
